COMPONENTS OF THE 2014-15 VACCINE:

The influenza vaccine protects you against three strains of influenza expected to be the most prevalent each year. The three component strains include: A/California/7/2009 (H1N1)-like virus, an A/Texas/50/2012 (H3N2)-like virus, and a B/Massachusetts/2/2012-like (Yamagata lineage) virus.

POSSIBLE SIDE EFFECTS:

Most people have no side effects from the flu shot. The most common reaction is soreness at the injection site for a day or two. Occasionally, persons may experience a fever or muscle aches for one or two days. As with any drug or vaccine there is a slight possibility that an allergic reaction, or even death, could occur. THE VACCINE CANNOT CAUSE INFLUENZA; RESPIRATORY ILLNESS AFTER VACCINATION IS COINCIDENTAL AND UNRELATED TO THE VACCINE.

DO NOT TAKE THE FLU SHOT IF:

- You have a severe allergy to eggs.
- You have ever had a serious reaction to the flu shot.
- You have a fever (delay the shot until the fever is gone)

CHECK WITH YOUR PHYSICIAN BEFORE TAKING THE SHOT IF:

- You have ever had Guillain-Barre Syndrome
- You are Pregnant
